A fifth of Brazilian soy in Europe is result of deforestation

Study findings suggest more needs to be done to protect rainforest in pending trade agreements

Fiona Harvey and Dom Phillips

Thu 16 Jul 2020 19.00 BST

Large quantities of the soy and beef imported to Europe from Brazil have been “contaminated” by deforestation, research shows.

The findings suggest much more needs to be done to protect Brazilian land as pending trade agreements are likely to increase sales to European consumers.

It's important to say this is not a step towards a paywall
